

# New Vauhti SKI BASE CLEANERS/RESTORERS

Vauhti has developed a completely new kind of a product for cleaning/restoring the ski glide sections

Due to the warming temperatures and fast changing conditions there is more dirt exposed in the snow and on the ski tracks. Dirt stick easily onto the ski base and will reduce glide.

## SKI BASE CLEANER – WITH FLUOR

Effective base cleaner which includes fluor. Liquid feels oily. It does not include any solvents.

Colour: **Red**

## SKI BASE CLEANER

Removes effectively and gently all dirt, but does not affect the glide wax or the glide of the ski. Does not include any solvents. Liquid feels “oily” and does not evaporate.  
Colour: **Blue**

Clean the glide sections with [Vauhti Ski Base Cleaners/Restorers](#) always after ski day. Then dirt is not able to penetrate into the pores of the polyethylene base. After cleaning you can apply the glide waxes as usual according to the conditions.

[Vauhti Ski Base Cleaner/Restorer](#) treatment is much better and faster alternative to clean ski bases than traditional hot wax scraping method. [Vauhti Ski Base Cleaner/Restorer removes the dirt](#). When cleaning by hot wax scraping the dirt may penetrate even deeper into the pores of the ski

### Use Vauhti Ski Base Cleaner/Restorer also for the base preparation:

1. Spray the cleaner onto the glide sections.
2. Let it effect on dirt minimum 2 min.
3. Clean and dry the base with Vauhti polishing cloth.

#### 4. *Base prepping:*

Spray the Cleaner/Restorer generously onto the cleaned glide surfaces and let absorb ca. 10-12 hours. Remove the excessive. Glide wax the ski base as usual.

**Note! Do not apply Vauhti Ski Base Cleaners/Restorers onto the grip sections of the ski!**

*ski wax*  
**vauhti**®
